

The development of IMS (Integrated Material Systems) began some 12 years ago and has progressed steadily with knowledge gained by our system users and our highly skilled staff. IMS has strong IT and user support groups from such diverse backgrounds as project purchasing, construction, pipe fabrication, welding and fitting, office management, accounting, marketing, teaching and the Canadian Forces.

As IMS is a privately owned company with excellent financial status, enhancements to our system on behalf of our clients or based on new ideas from our staff are completed quickly and without delay awaiting approvals. We continue to make improvements as new client requirements and applications are identified. IMS applications are currently in use on over 40 major projects in the US and Canada.

IMS Applications

- Project Set Up
- Document Control
- Material Take Off (MTO)
- Material Control
- Tagged Equipment
- Purchasing
- SOC Supplier Application
- Warehousing
- Spool Fabrication Tracking
- Quality Control
- Structural Steel Fabrication Tracking
- Excess Inventory Control
- Cable Management
- Transportation and Logistics
- Module Planning
- Plant Maintenance
- Construction Equipment Rentals

Standard Features

- Use of FTP site applications for downloading of data
- Interface with Supplier, Engineering, Client and Fabrication facilities systems
- Multi Project Details and Tracking
- Quickly installed to client servers
- User friendly for ease of training
- Remote access by internet
- User access by project or activity for viewing and/or update rights
- Capture and allow access to drawings, pictures and data sheets

System Overview
